Cybersecurity for

Best Practices to

Research Information Systems

Healthcare cybersecurity is a mounting concern. Other than 2015, healthcare data breaches have increased every year since the Department of Health and Human Services' Office for Civil Rights began tracking breach data in October 2009. In this blog, we propose a risk-based security framework based on the model used by the grant issuing agency of the NIH.

User Acceptance Testing Best Practices For Scientific Information Solutions

User Acceptance Testing (UAT) is critical to the success of an IT project, as it verifies that the system software performs in a manner that is acceptable to the user. Organizations that make the mistake of skipping UAT, or conducting hastily, often experience financial or operational losses, along with post release rework. In this white paper, we will discuss UAT best practices.
